DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

Claims 1, 4, 8-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Naftchi et al. '933 (see col. 133) or '962 (see col. 119).

Applicant argues that the patents disclose a reaction product of two compounds. While this may be true, they still do start with the two compounds lipoic acid and aminoguanidine, see col. 133, under number 208, of Naftchi '933 and col. 119 of Naftchi '932. In Naftchi '962 for example at col. 119, number 208, the same compounds are shown. All the claims require is the that the compounds are separate which they are before they are reacted.

Applicant continues to argue that the Naftchi patents show two ingredients which are not present together at the beginning of the reaction. Applicant points the examiner to example 1. First of all, both patents have more than one example 1. Naftchi '962, at col. 8, col. 18, and col. 130 all have an example 1. Thus, it is confusing which one applicant is talking about. Assuming applicant is talking about the example 1 at col. 8, this example 1 is referring to table 1 reactions not the reactions in table 2 which the

Art Unit: 1654

rejection is pertaining to. The example 1 in col. 8, refers to a reaction of a compound which is not even remotely related to the compound made in col. 119 of the Naftchi '962 patent. Further it is clear on col. 119, that the first column is the reactants which is why it says "reactants" and the second column says product. Thus, one of ordinary skill in the art would conclude that the first column was what was reacted. Secondly, the third "example 1" in col. 130 is what refers to the reactions in table 2. Clearly from this "example 1" it can be clearly seen that MBA is reacted with guanidine hydrochloride which is what table 2 says the reactants are which yields the product that table 2 says it does (see col. 119 under compound 208), thus the examiner is reading table 2 and the entire patent correctly contrary to the applicant's interpretation of the reference.

Thus, as the patents teach, the reactants are the same as the separated claimed product since they are first separate before they are mixed, thus anticipating the claimed invention.

Claim Rejections - 35 USC § 103

Claims 1, 4, 8-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Naftchi et al. '933, Naftchi et al. '962, Petrus, or Lai.

The teachings and arguments of the Naftchi references are discussed above.

Applicant argues that Lai teaches a conjugate of nitrogen oxide scavengers and dithiol carbamates and conjugates thereof which means that the reaction derived from the two has the same deficiency as the Naftchi patents. This is simply not true since alpha-lipoic acid is clearly taught as an antioxidant (col. 12, lines 55-end) and aminoguanidine is clearly taught as a nitric oxide synthase inhibitor (see col. 21, lines 45-55). Both of these are taught to be in a group of components to be used together to treat a disease. Applicants argue that the components are different but in the reference there is nothing to make one believe that the aminoguanidine and the lipoic acid are modified in any way, they are simply used in the same composition, thus they are at first, separated.

Applicant next argues that Petrus (see the claims) uses an aminosugar and therefore cannot teach the claimed invention since amino sugars are "the building blocks of our articular cartilage and have anti-inflammatory actions", but this does not matter. Applicant is claiming a product and as long as there is motivation to put the two components together which there is (see the claims) then the claims are obvious over the cited art of record.

In response to the language "consisting essentially of" in the claim, applicant is reminded of MPEP 2111.03:

For the purposes of searching for and applying prior art under 35 U.S.C. 102 and 103, absent a clear indication in the specification or claims of what the basic and novel

Art Unit: 1654

characteristics actually are, "consisting essentially of" will be construed as equivalent to "comprising." See, e.g., PPG, 156 F.3d at 1355, 48 USPQ2d at 1355 ("PPG could have defined the scope of the phrase consisting essentially of for purposes of its patent by making clear in its specification what it regarded as constituting a material change in the basic and novel characteristics of the invention."). See also In re Janakirama-Rao, 317 F.2d 951, 954, 137 USPQ 893, 895-96 (CCPA 1963). If an applicant contends that additional steps or materials in the prior art are excluded by the recitation of "consisting" essentially of," applicant has the burden of showing that the introduction of additional steps or components would materially change the characteristics of applicant's invention. In re De Lajarte, 337 F.2d 870, 143 USPQ 256 (CCPA 1964). See also Ex parte Hoffman, 12 USPQ2d 1061, 1063-64 (Bd. Pat. App. & Inter. 1989) ("Although consisting essentially of is typically used and defined in the context of compositions of matter, we find nothing intrinsically wrong with the use of such language as a modifier of method steps. . . [rendering] the claim open only for the inclusion of steps which do not materially affect the basic and novel characteristics of the claimed method. To determine the steps included versus excluded the claim must be read in light of the specification. . . . [I]t is an applicant's burden to establish that a step practiced in a prior art method is excluded from his claims by consisting essentially of language.").

Applicants have not shown how any **other** ingredients that those which are claimed materially affect the fundamental characterisitics of the invention. Since aminoguanidine is an amino sugar, then how can it have a completely different activity from that of applicant's invention when applicant's invention encompasses aminosugars, namely aminoguanidine?

Thus, the claimed invention is still obvious over the cited references.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1654

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael V. Meller whose telephone number is 571-272-0967. The examiner can normally be reached on Monday thru Thursday: 9:30am-6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
